Rawalpindi, Punjab, 43600, PK

Software Engineering student skilled in full-stack development, desktop/mobile apps, and object-oriented programming. Experienced in AI and machine learning projects. Familiar with 3D modeling tools like Blender. Passionate about applying creative and technical skills to build innovative software solutions.

Work Experience

Projects

Marketplace Application Nov 2024

Built a marketplace application with the MERN stack, integrating a Location API and a working chat system. Added a Gemini chatbot for customer support, assisting users with product inquiries.

Restaurant Management Desktop Application Apr 2023

Designed and developed a desktop-based restaurant management system using Java and MySQL. Included modules for order processing, menu management, staff login, and real-time database operations.

Facial Expression Detection App Apr 2025

Designed and deployed an AI-based web app using TensorFlow and Flask to detect facial expressions such as happy, sad, and angry. Implemented a CNN model and integrated live webcam input for real-time analysis.

Airline Management System Nov 2023

Built a terminal-based airline system in C++ using Object-Oriented Programming principles. Supported features like flight booking, passenger records, and modular class-based architecture.

Core Skills

Programming Languages: C++, Javascript, Python, Java, C#

Web & App Development: MERN Stack, Figma, MySQL Workbench, Postman

Version Control & DevOps: Git, GitHub, Jira, Docker

Testing Frameworks: JUnit, TestFX

Education

National University of Computer and Emerging Sciences, FAST, Islamabad Aug 2022 - Present
Bachelors Software Engineering
